DASH MOUNTABLE & EYELET MODELS AVAILABLE

QUALITY RUGGED CONSTRUCTION FOR A PROFESSIONAL LOOK

COMPATIBLE WITH CTEK #3300 & #7002 CHARGERS

POWERING YOUR LIFESTYLE

Energy . Power . Style

DONT LET THIS HAPPEN TO YOU

PROTECT YOUR INVESTMENT

Improperly charging your power cells will lead to a lowered life-span and can be avoided. Protect your investment by charging properly.

Manual charging is complicated and a hassle. Your cells may not be getting a good charge by your vehicle's charging system alone. It is crucial for you to assure proper charging.

FOR BEST RESULTS AND MAXIMUM LIFE-SPAN USE CTEK #3300 & 7002 AUTOMATIC CHARGERS & COMFORT INDICATORS

OVERCHARGED POWER CELLS

Can be unsafe and potentially dangerous, manual chargers and units not designed to properly charge AGM VRLA power cells provide little to no protection against over charging.

UNDERCHARGED POWER CELLS

Have a lowered capacity and shortened life due to sulfation. Allow this to occur too often and your cell will no longer be able to take a charge. Using a CTEK #3300 or #7002 charger and Comfort Indicator Panel will allow you to monitor and maintain properly with minimal effort.
